HOW TO PREPARE FOR MICE ENTRY POINTS SEAL UP TREATMENT

THE PESTFORCE INC WILL BE PROVIDING MICE CONTROL SERVICE IN YOUR RESIDENCE
ON _____ STARTING BETWEEN **9 AM TO 5 PM.**

THE PESTFORCE kindly asks you to co-operate for mice entry points seal up treatment. We are going to seal and fix the holes around plumbing and heating pipes that mice are entering through into your suite.

PRIOR TO TREATMENT

- All the heat registry must be cleared. Remove all items at least two feet around the heat pipes to ensure our technician can have easy access.
- Remove all the items from under the kitchen and bathrooms sinks.
- Fridge and stove should be moved away from the walls.

ADDITIONAL RECOMMENDATIONS

- We highly recommend installation of external bait stations around the building to prevent mice.
- Kitchen countertop, surfaces must be clean and grease free, especially the areas around the fridge, stove, microwave and toaster.
- Reduce clutter! Mice hide in cluttered areas, and they use paper to build nests. Ensure the area next to the outside walls and the garage, crawlspace, attic, storage areas, are neat and tidy.
- Throw out garbage daily and ensure dirty dishes are not left out overnight.
- Ensure pet food is secured and sealed in heavy-duty plastic containers, and is not left out after the pets have been fed. This also applies to bird food.
- Exterior entry points and gaps should be sealed or fixed. We recommend to have a door sweeper for all the doors, especially those connecting to the outside. Also, keep doors closed at all times.

SAFETY INFORMATION

Do not need to vacate before or after the treatment

Do not touch the bait station. Keep children and pets away

THANK YOU FOR YOUR CO-OPERATION
